INTRODUCTION

Data users in the public and private sectors frequently are in need of economic and demographic information about the State of Utah. More often than not, however, the needed data is found in numerous government reports, located at several different places, for various years. This report, Utah Economic and Demographic Profiles, provides in one publication much of the key economic and demographic data about Utah. Certainly, this report does not include all requested data items, but it does capture some of the most widely used and frequently requested economic and demographic information. The intent of this report is to provide important data to government agencies and the private sector to be used for well-advised analysis and planning.

Users of these profiles will be able to assess current economic and demographic conditions in Utah. For instance, the economic health of the state, multi-county districts and counties can be considered based on changes in population, employment, personal income, assessed valuations, and gross taxable sales. The unemployment rates and per capita income figures may also help in determining the current economic conditions of an area.

In addition to the current status of the economy, users may be able to identify economic and demographic trends in Utah. For example, the demographic trend of lower births in the mid and late 1980's is shown in the state profile. Also, the economic slowdown in the mining industry is apparent. These and other trends may also be shown in the seven multi-county districts and 29 counties in Utah.

The time series of data from 1960 to 1987 should help data users to analyze trends and current conditions within the context of the economic and demographic realities of the past two decades. This historical data base should help analysts make more informed judgements about the data.

The data for these profiles come from many sources. Population data were provided by the Utah Population Estimates Committee, employment data from the Utah Department of Employment Security, personal income data from the U.S. Department of Commerce, Bureau of Economic Analysis, assessed valuations and gross taxable sales from the Utah State Tax Commission, and birth and death data from the Utah Department of Health.

These profiles include the long awaited April 1988 release of personal income data on a county level by the Bureau of Economic Analysis (BEA). In this release, BEA revised all personal income numbers back through 1969.

These profiles are available in a machine readable format. For information about these profiles contact the Data Resources Section of the Utah Office of Planning and Budget, (801) 538-1036.

Introduction

This report is a collection of the most commonly requested economic and demographic information about Utah. The Utah Office of Planning and Budget has updated this report three times, each time trying to add an additional year of data and correct for revisions and mistakes. Data are presented by county, multi-county district (MCD), and state. The purpose of this report is to provide the public and private sector with a time series of economic and demographic data to use in making wise decisions.

The data for these profiles come from many sources. The population data come from the Utah Population Estimates Committee. Employment and recent personal income data are from the Utah Department of Employment Security. The primary source for personal income data, however, is the U.S. Bureau of Economic Analysis. Both assessed valuations and gross taxable sales are from the Utah State Tax Commission and birth and death data come from the Utah Department of Health.

The Utah Office of Planning and Budget has attempted to incorporate all revisions of historical data and correct all known data problems in this report. As with any statistical compendium, however, there is always the potential for error. The Utah Office of Planning and Budget welcomes comments and corrections.

These profiles are also available in a machine readable format. Any questions or comments about this report should be directed to the Demographic and Economic Analysis section, Utah Office of Planning and Budget, (801) 538-1036.
